Resource planning for multiple projects involves sizing up your existing capacity in terms of skills relevance, bench-strength, and availability. With this data, you can then optimize workloads while making use of every single vital skill. Any basic resource management software should have the

following components within –

The Art of Managing resources across multiple projects

A simple, powerful tool for multi-project scheduling with automatic resource leveling Nowadays, many organizations concurrently pursue a variety of projects of different sizes using several common resources. Their objective is to maximize project completion rate and on-time completion subject to the availability of limited resources.

Multi-Project Scheduling - Optisol

One of Visual Planning's primary concepts is resource scheduling. Basically resource scheduling

refers to the set of actions and methodology used by organizations to efficiently assign the resources they have to jobs, tasks or projects they need to complete, and schedule start and end dates for each task or project based on resource availability.

What is resource scheduling? - Visual Planning ...

Take advantage of the resource scheduling features of your online project management software. Use the workload scheduling tools and reports to see where project resources are overloaded. It's easy to see who has too much work and who can take on more tasks if you use graphical reports. You can then apply resource leveling

(adjusting the workload so it's within acceptable boundaries and no one is overstretched).
