Metamorphic petrology is concerned with field relations and local tectonic environments; the description and classification of metamorphic rocks in terms of their texture and chemistry, which provides information on the nature of the premetamorphic material; the study of minerals and their chemistry (the mineral assemblages and their possible reactions), which yields data on the temperatures and pressures at which the rocks recrystallized; and the study of fabrics and the relations of ...

Metamorphic petrology focuses on the composition and texture of metamorphic rocks (rocks such as slate, marble, gneiss, or schist which started out as sedimentary or igneous rocks but which have undergone chemical, mineralogical or textural changes due to extremes of pressure, temperature or both)

Petrology - Wikipedia

A rock is any naturally occurring solid mass or aggregate of minerals or mineraloid matter. It is categorized by the minerals included, its chemical composition and the way in which it is formed. Rocks are usually grouped into three main groups:

igneous rocks, metamorphic rocks and sedimentary rocks. Rocks form the Earth's outer solid layer, the crust, and most of its interior, except for the ...

Metamorphic rocks can be derived from sedimentary, igneous or other metamorphic

rocks from heat and pressure in which the rock remains in a solid state (melting would create and igneous rock) In general terms metamorphic rocks are characterised by an increase in both crystal size and density though there are some exceptions.

METAMORPHIC ROCKS & PROCESSES

As stated above, common metamorphic rocks contain many more than the 3 components we would like to have for easy graphical description of composition and mineral assemblage.

The 13 major elements (expressed as oxides) in most (not all) metamorphic rocks are SiO_2 , Al_2O_3 , TiO_2 , FeO , Fe_2O_3 , MnO , CaO , MgO , K_2O , Na_2O , P_2O_5 , H_2O , and CO_2 . Obviously if a rock consists only of one or two of these constituents, the problem is easy.

Metamorphic petrology

- is a field of science that focuses on the study of metamorphic rocks' composition and texture. This type of rock is more complex compared to igneous and sedimentary since it is often a product of chemical, mineralogical, or textural changes caused by extreme pressure or temperature.
