1. Descriptive research design: In a descriptive design, a researcher is solely interested in describing the situation or case under their research study. It is a theory-based design method which is created by gathering, analyzing, and presenting collected data. This allows a researcher to provide insights into the why and how of research.

Research Design: Definition, Characteristics and Types ...

Core principle #6: Your case study must clearly communicate your position (or at least your unique value) Your position clearly states many things, including what you offer, who you offer it to, and why your offering is different and better. The core of your position is your unique value proposition.
