A vector approach to oscillations (Book, 1965) [WorldCat.org]

The Moon does not have free (Euler) oscillations; it has oscillations with a period of $T_5 \approx 74.180$ Julian years rather than $T \approx 148.167$ Julian years. A flexible and informative vector approach to the problem of physical libration of the rigid Moon has been developed in which three Euler differential equations are supplemented by 12 kinematic ones.
