International Medical Graduate and the United States Medical Residency Application

A Guide to Achieving Success *Springer Nature*

This unique, socially conscience reference provides valuable guidance to international medical graduates (IMG's) looking to complete a residency in the United States. The medical residency application process in the United States is competitive and complex. Additionally, many IMG's go through training programs that sharply differ from the medical school training and the sociocultural elements of United States medicine and residency are unlike any other country. Organized into three parts, this book meets the need for a pragmatic, evidence based guide that answers important questions, and imparts indispensable advice to IMGs. Part I directly tackles the concerns IMG's have regarding specific elements of residency applications, including the importance of a master's degree and how to get a strong letter of recommendation. Part II then addresses how to prepare for interviews, preliminary programs and travel. Finally, the book answers the common "what ifs" and "what's next" questions many IMG's ponder. Atlas of Salivary Gland Pathology *Springer*

Surgical pathologists play a central role in patient surveillance and treatment by surgeons, radiation oncologists, and medical oncologists. Although salivary gland tumors are uncommon overall, their histopathologic diversity and challenge command the attention of practicing surgical pathologists. Atlas of Salivary

Gland Pathology focuses on the diagnostic approach to salivary gland neoplasia—one of the more challenging fields within surgical pathology—emphasizing the need to understand downstream implications with respect to patient surveillance and treatment. The presence of formidable histologic mimicry in salivary gland neoplasia is well-documented in the pathology literature and has also been observed in the consultation practice of the volume editor. This textbook is designed with the needs of practicing surgical pathologists and pathologists-in-training in

mind, providing a comprehensive overview of both common and rare salivary gland neoplasms. The primary educational objectives for readers include the following: 1) distinguish benign from low-grade malignant salivary gland neoplasms, 2) effectively use histochemical, immunohistochemical, and cytogenetic studies in challenging cases, 3) understand which diagnoses merit additional surgery and/or adjuvant therapy (radiation, chemotherapy), and 4) enhance pathologist-to-clinician communication in the setting of salivary gland disease.
