Merton's portfolio problem is a well known problem in continuous-time finance and in particular intertemporal portfolio choice. An investor must choose how much to consume and must allocate his wealth between stocks and a risk-free asset so as to maximize expected utility. The problem was formulated and solved by Robert C. Merton in 1969 both for finite lifetimes and for the infinite case. Research has continued to extend and generalize the model to include factors like transaction costs and ban

As a summary, we will say that the theory and logic behind Markowitz's portfolio theory is sound, but that its implementation creates a large number of issues. Due to approximation and estimation errors combined with an optimization process, mean-variance optimization tends to significantly overweight assets with large expected returns, low volatilities and/or negative correlations with other assets, and

this results in highly concentrated portfolios.
