Oxidative Stress And Redox Regulation

For this book we would like to recruit the experts in the field of redox chemistry, bioinformatics and proteomics, redox signaling and oxidative stress biology to discuss how organisms achieve the appropriate redox balance, the mechanisms that lead to oxidative stress conditions and the physiological consequences that contribute to aging and disease.

Oxidative Stress and Redox Regulation | SpringerLink

Abstract. Oxidative stress is believed to be a cause of aging and cardiovascular disorders. In response to inflammation or endothelial cell injury, production of reactive oxygen species (ROS) is enhanced in vascular cells. These changes contribute to the initiation of atherosclerosis. Vascular cells possess anti-oxidant systems to protect against oxidative stress, in addition to the redox system.

Oxidative Stress and Redox Regulation of Lung Inflammation in COPD - PubMed. Reactive oxygen species, either directly or via the formation of lipid peroxidation products, may play a role in enhancing inflammation through the activation of stress kinases (c-Jun activated kinase, extracellular signal-regulated kinase, p38) and redox-sensitive transcription factors, such as nuc

Several studies have revealed that regulation of intra- and extra- cellular reducing environment by reducing excess ROS by using antioxidants, reducing oxygen concentration are effective for improving embryo development. Also, recent studies have demonstrated the difference in gene expression affected by oxidative stress.

Oxidative stress is a key feature of Inflammatory Bowel Disease (IBD). However, there is still insufficient understanding of the redox architecture that defines the pathogenic mechanisms that link oxidative stress to IBD. In addition to reactive oxygen species (ROS), there are reactive nitrogen species (RNS) and reactive sulfur species (RSS).

It has recently been demonstrated that IRP2 is subject to redox regulation, in which oxidative stress caused by glucose deprivation in HEK293 cells induced oxidation of Cys-512 and Cys-516 in IRP2 that in turn decreased IRP2 binding to IREs , and decreased IRE binding ability of IRP2 was correlated with decreased transferrin receptor-1 expression that may allow cells to limit iron transport and hindering subsequent iron-mediated ROS production.

The balance between electrophilic oxidative stress and protective biomolecular nucleophiles predisposes the evolution of modern life forms.

Imbalances of the two can produce aberrant redox homeostasis with resultant pathologies. Understanding the pathways involved provides opportunities to consider interventional strategies.

Recently, it has been shown that oxidative stress and the redox status of the cells can also regulate nuclear histone modifications, such as acetylation, methylation and phosphorylation, leading to chromatin remodelling, and recruitment of basal transcription factors and RNA polymerase II leading to the induction of pro-inflammatory mediators (fig. 1 ↓) 2, 3. The present review discusses the role of oxidative stress and redox status of the cells in cell signalling, NF-κB activation and ...
