In Geometry, secant lines are often used in the context of circles. The secant line below, in red, intersects the circle with center O, twice. If a line intersects a circle at only one point, it is called a tangent line. The blue line is a tangent line for the circle. Two nonparallel secant lines for a circle can intersect in one of three ways:

In words: the angle made by two secants (a line that cuts a circle at two points) that intersect outside the circle is half of the furthest arc minus the nearest arc. Why not try drawing one yourself, measure it using a protractor, and see what you get? It also works when either line is a tangent (a line that just touches a circle at one point). Here we see the "both are tangents" case:
