Advanced Multibody System Dynamics | SpringerLink

Multibody dynamics, as opposed to Multi Flexible Body Dynamics (MFBD), is the simulation of groups of bodies idealized as being perfectly rigid. Multi-body dynamics simulation software predicts the motion and the interaction forces by automatically formulating differential equations to describe the motion of a system of bodies and then solving them numerically.

A multibody dynamic (MBD) system is

one that consists of solid bodies, or links, that are connected to each other by joints that restrict their relative motion. The study of MBD is the analysis of how mechanism systems move under the influence of forces, also known as forward dynamics. A study of the inverse problem, i.e. what forces are necessary to make the mechanical system move in a ...

Advanced Multibody System Dynamics : Simulation and ...

In this paper, a modular formulation of multibody systems is proposed which is based on the block representation of a multibody system with corresponding input and output quantities. Advantages of this modular approach range from independent and parallel modeling of subsystems over the easy exchange of the resulting modules to the use of different software for each module.
