Some Solutions to Stein & Shakarchi's Real Analysis

Let x be a real number. If $x < \epsilon$ is true for all real numbers $\epsilon > 0$, then $x = 0$. This statement is the general idea of what we

do in analysis. Suppose next we really wish to prove the equality $x = 0$. In analysis, we prove two inequalities: $x < 0$ and $x > 0$. To prove the inequality $x < 0$, we prove $x < -\epsilon$ for all positive ϵ .

A modern Analysis book with lots of solved problems is the two volume book Principles of Real Analysis and Problems in Real Analysis from Aliprantis and Burkinshaw. They present more than 600 problems in their Principles and they provide complete solutions to these problems in their Problems book which was sometimes very helpful for me.

call $x = \operatorname{Re} z$ the real part of z and $y = \operatorname{Im} z$ the imaginary part of z , and we call $|z| = \sqrt{x^2 + y^2}$ the absolute value, or modulus, of z . Two complex numbers $z = x + iy$, $w = u + iv$ are equal if and only if $x = u$ and $y = v$. 1.1.2. Subsets. Theorem. Let $\mathcal{E}$ be a collection of sets. Then $(\bigcap \mathcal{E})^c = \bigcup \{E^c : E \in \mathcal{E}\}$: Proof. Let $A = (\bigcap \mathcal{E})^c$ and $B = \bigcup \{E^c : E \in \mathcal{E}\}$. If $x \in A$, then $x \notin \bigcap \mathcal{E}$, hence $x \notin E$ for any $E \in \mathcal{E}$, hence $x \in E^c$ for every $E \in \mathcal{E}$, so that $x \in \bigcup \{E^c : E \in \mathcal{E}\}$. Thus $A \subseteq B$. Conversely, if $x \in B$, then $x \in E^c$

Mathematical analysis is the branch of mathematics dealing with limits and related theories, such as differentiation, integration, measure, infinite series, and analytic functions.. These theories are usually studied in the context of real and complex numbers and functions. Analysis evolved from calculus, which involves

the elementary concepts and techniques of analysis.
