With a TT install, additional protection

will be required in the form of a RCD to protect against faults to earth, and maintain adequate shock protection from indirect contact faults. With the simplest outbuilding setups, it may be appropriate to use a 30 mA trip threshold device at the head end of the cable and forgo any further RCD protection in the outbuilding.

Taking electricity outside - DIYWiki

The United States electrical codes require that the neutral be connected to earth at the "service panel" only and at no other point within the building wiring system. Formally, the neutral is called the "grounded conductor"; as of the 2008 NEC, the terms "neutral conductor" and "neutral point" have been defined in the Code to conform to what had been

common usage.

Electrical wiring in North America - Wikipedia

Electrical wiring in the United Kingdom is commonly understood to be an electrical installation for operation by end users

within domestic, commercial, industrial, and other buildings, and also in special installations and locations, such as marinas or caravan parks. It does not normally cover the transmission or distribution of electricity to them.
