Abstract. A reaction-diffusion computer is a spatially extended chemical system, which processes information by transforming an input concentration profile to an output concentration profile in a deterministic and controlled manner. In reaction-diffusion computers, the data are represented by concentration profiles of reagents, information is transferred by propagating diffusive and phase

waves, computation is implemented via the interaction of these traveling patterns (diffusive and ...

Hollow multishelled structures (HoMSs) enable material intriguing properties and diverse applications. However, constructing all-polymer HoMSs (p-HoMSs) remains a great challenge. Here, we first develop a one-step self-template strategy to synthesize p-HoMS spheres through controlled reaction-diffusion of a polyelectrolyte pair. Besides instant reaction, the high concentration and moderate ...
