This also applies when the exponents are algebraic expressions. Therefore, we can solve many exponential equations by using the rules of exponents to rewrite each side as a power with the same base. Then, we can set the exponents equal to one another and solve for the unknown. For example, consider the equation $34x-7 = 32x$ $3^3 4^x - 7 = 3^2 x^3$. To solve for x, we use the division property of exponents to rewrite the right side so that both sides have the common base, 3 3.
