Aqueous solutions of acids are electrolytes, meaning that they conduct an electrical current. Some acids are strong electrolytes because they ionize completely in water, yielding a great many ions. Other acids are weak electrolytes that exist primarily in a non-ionized form when dissolved in water. Acids have a sour taste.

Properties of Acids and Bases | Chemistry for Non-Majors

The Arrhenius definition first explains acid/base chemistry. In the late 1800s, the Swedish scientist Svante Arrhenius proposed that water can dissolve many

compounds by separating them into their individual ions. Arrhenius suggested that acids are compounds that contain hydrogen and can dissolve in water to release hydrogen ions into solution.

Acids and Bases I | Chemistry | Visionlearning

In chemistry, acids and bases have been defined differently by three sets of theories. One is the Arrhenius definition, which revolves around the idea that acids are substances that ionize (break off) in an aqueous solution to produce hydrogen (H^+) ions while bases produce hydroxide (OH^-) ions in solution.
