Vertical antennas offer an omnidirectional signal pattern, take up very little space, and are easy to install. They do not necessarily require support structures such as trees and buildings (I mounted my 14AVQ to a pipe pounded into the ground). Functionally they have a low angle of radiation, which is favorable to DX.

A radial system has two main purposes,

replace the missing half of the antenna (a vertical is simply a dipole with earth substituting for the missing half when set vertical, unfortunately earth is a very poor RF conductor) and forming an electrostatic shield to prevent much of the RF on the vertical element from capacitively coupling to the lossy soil.
