### **Chemical Indicators— It's Not Just A Numbers Game**

To be useful, chemical indicators must  
 be both sensitive and easily detectable.  
 It need not, however, show a visible  
 change. The type of indicator depends  
 on how it's being used. For example, a

sample analyzed with spectroscopy may employ an indicator that wouldn't be visible to the naked eye, while a test for calcium in an aquarium would need to produce an obvious color change.

### **What Is a Chemical Indicator?**

Chemical indicator, any substance that gives a visible sign, usually by a colour change, of the presence or absence of a threshold concentration of a chemical species, such as an acid or an alkali in a solution. An example is the substance called methyl yellow, which imparts a yellow colour to an alkaline solution. If acid is slowly added, the solution remains yellow until all the alkali has ...

Artificial and Natural indicators are the two types of Chemical indicators. Litmus, red cabbage, turmeric, china rose are a number of the present indicators around us. Artificial Indicators. Litmus Litmus is the most ordinarily used natural chemical indicator used. It is the answer to various sorts of dyes naturally obtained from lichens.

### **Chemical Indicators - Definition and Types**

It is important to note that chemical indicators alone do not confirm that an item is sterile. Chemical indicators must be used as part of comprehensive quality control program, that also includes the use of biological indicators and physical monitors, to assure that the conditions for sterilization were met.

### **What is a Chemical Indicator for Sterilization ...**

This is a very sensitive chemical indicator that does not participate significantly in the oxidation-reduction reaction in a solution. Another common example of a very sensitive chemical indicator with a narrow range is diphenylcarbazone. It indicates an increase in mercuric ion concentration from 0.000001 to 0.00001 mole per litre.

### **What Is A Chemical Indicator Used For?**

Indicators are substances whose solutions change color due to changes in pH. These are called acid-base indicators. These are called acid-base indicators. They are usually weak acids or bases, but their conjugate base or acid forms have different colors due to differences in their absorption spectra.
