Cell biology is a branch of biology studying the structure and function of the cell, also known as the basic unit of life. Cell biology encompasses both prokaryotic and eukaryotic cells and can be divided into many sub-topics which may include the study of cell metabolism, cell communication, cell cycle, biochemistry, and cell composition. The study of cells is performed using several techniques such as cell culture, various types of microscopy, and cell fractionation. These have allowed for and

Cell biology - Wikipedia

We are the Max Planck Institute of Molecular Cell Biology and Genetics (MPI-CBG) We do pioneering basic research. 500 curiosity-driven scientists from over 50 countries ask: How do cells form tissues? Our research programs span multiple scales of magnitude, from molecular assemblies to organelles, cells, tissues, organs, and organisms.

MPI-CBG: Home

Genetics is built around molecules called DNA. DNA molecules hold all the genetic information for an organism. It provides cells with the information they need to perform tasks that allow an organism to grow, survive and reproduce. A gene is one particular section of a DNA molecule that tells a cell to perform one specific task.
