The Maxwell-Boltzmann Distribution

In physics, the Maxwell-Boltzmann distribution is a particular probability distribution named after James Clerk Maxwell and Ludwig Boltzmann. It was first defined and used for describing particle speeds in idealized gases, where the particles move freely inside a stationary container without interacting with one another, except for very brief collisions in which they exchange energy and momentum with each other or with their thermal environment. The term "particle" in this context refers ...

For ideal gases, the distribution function $f(v)$ of the speeds has already been explained in detail in the article Maxwell-Boltzmann distribution. The figure below shows the distribution function for different temperatures. $f(v) = (\sqrt{m/2\pi k_B T})^3 \cdot 4\pi v^2 \cdot \exp(-m \cdot v^2 / 2k_B \cdot T)$ Maxwell-Boltzmann distribution function.

The Maxwell Boltzmann Distribution Function

In statistical mechanics and mathematics, a Boltzmann distribution is a probability distribution or probability measure that gives the probability that a system will be in a certain state as a function of that state's energy and the temperature of the system. The distribution is expressed in the form: $p_i \propto e^{-\frac{\epsilon_i}{kT}}$ where p_i is the probability of the system being in state i , ϵ_i is the energy of that state, and a ...
