Structural Analysis Using Virtual Work

The work in virtual work clearly implies energy, since work is one form of energy. Work is energy that is required to move mass around in space. You may recall that the expression for work (W) is equal to: (1) $W = P \Delta$. where P is a force on a body or structure and Δ is the displacement of that body or structure.

The Principle of Virtual Work Definitions:
 Virtual work is the work done by a real force acting through a virtual displacement or a virtual force acting through a real displacement. A virtual displacement is any displacement consistent with the constraints of the structure, i.e., that satisfy the boundary conditions at the supports. A virtual force is any system of forces in equilibrium.

In mechanics, virtual work arises in the application of the principle of least action to the study of forces and movement of a mechanical system. The work of a force acting on a particle as it

moves along a displacement is different for different displacements. Among all the possible displacements that a particle may follow, called virtual displacements, one will minimize the action.
