Slip casting or slip casting is a ceramic forming technique for pottery and other ceramics, especially for shapes not easily made on a wheel. In slip casting, a liquid clay body slip (usually mixed in a blunger) is poured into plaster moulds and allowed to form a layer, the cast, on the inside walls of the mould. The process usually takes at least 24 hours per piece.

Slipcasting - Wikipedia

Slip forming, continuous poured, continuously formed, or slipform construction is a construction method in which concrete is poured into a continuously moving form. Slip forming is used for tall structures, as well as horizontal structures, such as roadways. Slipforming enables continuous, non-interrupted, cast-in-place "flawless" concrete structures which have superior performance characteristics to piecewise construction using discrete form elements. Slip forming relies on the quick-setting process
