Taxonomy Classification And Specimens

Taxonomy, in a broad sense the science of classification, but more strictly the classification of living and extinct organisms—i.e., biological classification. The term is derived from the Greek taxis (“arrangement”) and nomos (“law”). Taxonomy is, therefore, the methodology and principles of systematic botany and zoology and sets up arrangements of the kinds of plants and animals in hierarchies of superior and subordinate groups.

taxonomy & Classification

There are eight distinct taxonomic categories. These are: Domain, Kingdom, Phylum, Class, Order, Family, Genus, and Species. With each step down in classification, organisms are split into more and more specific groups. For example, all of the animals in the Kingdom Animalia are split into multiple phyla (plural of phylum).

Taxonomy | Basic Biology

Taxonomy is the branch of biology that classifies all living things. It was developed by the Swedish botanist Carolus Linnaeus, who lived during the 18 th Century, and his system of classification is still used today. Linnaeus invented binomial nomenclature, the system of giving each type of organism a genus and species name.

Taxonomy Classification And Specimens

Plant taxonomy is the science that finds, identifies, describes, classifies, and names plants. It is one of the main branches of taxonomy (the science that finds, describes, classifies, and names living things). Plant taxonomy is closely allied to plant systematics, and there is no sharp boundary between the two.

Plant taxonomy - Wikipedia

Taxonomy is a classification system that looks at shared traits to organize living things into groups. Traits are special characteristics (body parts or behaviors) that are found only in one type of thing (for example, an elephant’s trunk). Taxonomy is a constantly changing system that is often affected by new discoveries and new information.
