Structural Engineering

Structural engineering is a sub-discipline of civil engineering in which structural engineers are trained to design the 'bones and muscles' that create the form and shape of man-made structures. Structural engineers need to understand and calculate the stability, strength and rigidity and earthquake of built structures for buildings and nonbuilding structures.

Structural engineering - Wikipedia

Structural engineering deals with the framework of structures, making sure they can withstand the stresses of their environment and remain safe, stable and secure.

What Is Structural Engineering? | Live Science

Structural engineering is a branch of civil engineering that involves the application of the laws of physics, mathematics and empirical knowledge to safely design the ‘bones’ and load bearing elements of man made structures. Modern day structural engineering provides a large and detailed body of knowledge that can accurately predict the performance of different shapes and materials used in structures to resist loads and stresses on structures.

AWB Structural Engineering - Residential Design Seattle

Structural engineering is usually considered a specialty discipline within civil engineering, but it can also be studied in its own right. In the United States, most practicing structural engineers are currently licensed as civil engineers, but the situation varies from state to state. Some states have a separate license for structural engineers which is required to design special or high-risk structures such as schools, hospitals, or skyscrapers.

Structural engineer - Wikipedia

A structural engineer, as the name suggests, is an engineer who specialises in the structure of buildings. They determine the strength and durability of a structure – i.e. a building – and are a key professional in the construction process.

Do I need a structural engineer? | HomeOwners Alliance

Structural engineering is the subfield of civil engineering concerned with the strength and stability of buildings, bridges, airplanes, vehicles and other structures. The structural engineer works with architects and designers to calculate the system of support and other requirements to ensure the structural integrity of the finished product.
