Wiring Harness Design Guidelines

To make a custom trailer wiring harness, you first have to come up with an intended design based on the geometric and electrical requirements of a trailer. This design should be represented on paper so you can easily refer to it. Step 2: After putting down the design, you cut the wires into desired lengths using a wire-cutting machine/cutter.

- Based on the system schematic design, the type of signal a conductor is carrying, the amount of current in the circuit, and the type of wire insulation chosen for the aircraft, wire harness design engineer select wire part number to use. Using a 3D CAD system, the wire paths are specified

throughout the aircraft.

AN INTRO TO Wiring Harnesses

Electrical Harness Design Defining an electrical harness requires two steps. You must first define the required connectors and connection points. Once you have these connections, you are ready to begin defining the geometric bundle that links the various connection points. These geometric bundles will behave as a space reservation for the wiring they will contain. In this section of

Wire Harness and Cable Assembly Design Guidelines. In the past, wire harness design was done on the fly during assembly. As a result, harness design and assembly were rarely automated, the assembly time was long, the quality was inconsistent, and often much of the design work was done as the harness was manually assembled on the production line. Over time, manufacturers began to use small localized wire harness manufactures to help with samples and production needs.
