It is now known that these rate-limiting steps 2Molecular Biology of Cancer are genetic mutations that dysregulate the ac- tivities of genes that control cell growth, reg- ulate sensitivity to programmed cell death, and maintain genetic stability. Hence, tumor- igenous is a multistep process.

Molecular Biology of Cancer - Universidade de Coimbra

Cancer is characterised by uncontrolled cell division - for cancer cells to be successful in proliferation, a major change is the up-regulation of growth pathways and the reorganisation of metabolism to produce the energy and building blocks necessary for cell division. We aim to identify novel alterations in cancer cells that are crucial for their proliferation and that distinguish them from normal cells, thereby uncovering potentially less harmful anti-cancer targets.
