A flat plate of 15 cm x 10 cm is heated through a heating foil with a constant heat flux of 7667 W/m². Air jets with and without swirling action are considered, fixing the distance of target surface from nozzle exit at 2D, 4D and 6D. Reynolds numbers 18000, 20000 and 22000 and pipe diameters 8mm, 10mm and 12 mm have been considered for investigation.

In this work, we compute the linear and also nonlinear inflow disturbances that generate the largest response inside the boundary layer, for flow over a thin flat plate with a slender leading edge. In order to compare our results with earlier linear analyses, we constrain the inlet disturbance to be monochromatic in time, or a single frequency.

An experimental study of the incompressible flow near the side edge of a finite flat plate at zero incidence is reported for the Reynolds number range 10^4 to 10^6 , but comparison with data already published shows that the conclusions are quantitatively valid for Reynolds numbers up to 10^9 . The laminar velocity field is everywhere convex and does not contain any secondary flow other than that ...

The flow past a flat plate of finite width - Cambridge Core

The flow past a flat plate at Reynolds numbers in the range 0.1 to 10.0 is investigated by an analogue method. The solution gives the stream function and the vorticity in the flow field surrounding the plate. From these are obtained the local coefficient of friction, the pressure distribution along the plate, and the total drag

coefficient.

The test model, shown schematically in figure 1, was a rigid flat plate ($L = 12.9\text{m}$ long, 3.0m wide, 18.4cm thick) designed to span the width and run the length of the LCC's test section. Its leading edge was a 4:1 ellipse and the test surface of the model faced downward so that gravitational buoyancy forced bubbles toward the test surface.

The numerical computation confirms the finding obtained in our previous experiments that vortex shedding from flat plates with square leading and trailing edges is caused by the impinging-shear-layer instability. In particular, the Strouhal number based on the plate's chord increases stepwise with increasing d/h in agreement with the experiment.
