Diffractive elements are thin phase elements that operate by means of interference and diffraction to produce arbitrary distributions of light or to aid in the design of optical systems. VIAVI designs and fabricates diffractive elements with both binary and analog phase profiles. Binary elements attain efficiencies near 80% (neglecting surface losses) and often represent cost-effective solutions if feature sizes are too small for analog fabrication and if the desired pattern has centrosymmetry.

In this paper, the annular folded lens (AFL) is applied to the realization of a miniaturized system for the visible and near-IR spectrums (0.45-1.1µm). In order to correct the chromatic aberration, a hybrid AFL is designed with the multilayer diffractive optical element (MLDOE) in which the substrate materials are precision molded glasses. We propose a new design method of the MLDOE to ...
