Games of Incomplete Information - Stanford University

In game theory, a Bayesian game is a game in which players have incomplete information about the other players. For example, a player may not know the exact payoff functions of the other players, but instead have beliefs about these payoff functions. These beliefs are represented by a probability distribution over the possible payoff functions. John C. Harsanyi describes a Bayesian game in the following way. Each player in the game is associated with a set of types, with each type in the set corresponding to a particular set of beliefs about the other players' types.
