Underpinning Methods, Procedure and Applications

Underpinning Using Piled Raft .

Underpinning with a piled raft must be used when the whole structure needs to be underpinned. It is recommended when foundations are too deep for other underpinning methods or in areas where the soil is so hard that small equipment could not excavate up to require depth. Piles are placed at determined locations by loading conditions; then pockets below footings are broken and reinforced needle beams are placed to bear the wall's load.

What is involved in underpinning? The underpinning of foundations involves increasing the depth of existing foundations in order to transfer the building load to a more supportive soil type. Although there are a number of different techniques available for underpinning foundations the most common method is traditional mass concrete underpinning.

Underpinning of existing foundations - what is required?

8.5 Overview of LRFD for Foundations. The basic equation for load and resistance factor design (LRFD) states that the loads multiplied by factors to account for uncertainty, ductility, importance, and redundancy must be less than or equal to the available resistance multiplied by factors to account for variability and uncertainty in the resistance per the AASHTO LRFD Bridge Design Specifications. The basic equation, therefore, is as follows: $\Sigma \eta \gamma$.

Chapter 8 Foundation Design

The Building Regulations definition of 'building work' includes: '(f) work involving the underpinning of a building'. This refers to all or part of the building foundations. Compliance with the building regulations will usually be

dependent on the preparation of a structural design of the underpinning, and a description of the process involved.

Underpinning - Designing Buildings Wiki

The most common method is traditional mass concrete underpinning - a simple technique that involves excavating a segment of ground below the existing building foundation in controlled stages, to a depth where suitable bearing strata exists. The excavation is then filled with concrete and allowed to cure before the next 'pin' is excavated.

Underpinning Foundations and footings - Underpin process ...

Underpinning is a method of construction that sees the depth of the foundations to a building being increased. The soil beneath the existing foundation is excavated and is replaced with foundation material, normally concrete, in phases. Underpinning requires close attention to design,

methodology and safety procedures.

Is building regulations approval needed for underpinning ...

In construction or renovation, underpinning is the process of strengthening the foundation of an existing building or other structure. Underpinning may be necessary for a

variety of reasons: The original foundation isn't strong or stable enough. The usage of the structure has changed. The properties of the soil supporting the foundation may have changed or were mischaracterized during design. The construction of nearby structures necessitates the excavation of soil supporting existing foundation
