Molecular oncology has identified genes that are involved in the development of cancer. The research combined diverse techniques ranging from genomics, computational biology, tumour imaging, in vitro and in vivo functional models to study biological and clinical phenotypes. The proteins produced by these genes may serve as targets for novel chemotherapy drugs and other cancer treatments, or imaging scans.

Molecular oncology - Wikipedia

Molecular Oncology is an open access journal for new discoveries, approaches, and technical developments in basic, clinical, and discovery-driven translational cancer research. We focus on work that significantly advances understanding of disease processes

leading to human tumour development and/or establishes novel concepts of clinical significance in diagnosis, prognosis, and prevention strategies.
