Improper integrals are said to be convergent if the limit is finite and that limit is the value of the improper integral. divergent if the limit does not exist. Each integral on the previous page is defined as a limit. If the limit is finite we say the integral converges, while if the limit is infinite or does not exist, we say the integral diverges.

In this section we will look at integrals with infinite intervals of integration and integrals with discontinuous integrands in this section. Collectively, they are called improper integrals and as we will see they may or may not have a finite (i.e. not infinite) value. Determining if they have finite values will, in fact, be one of the major topics of this section.

Improper integrals are definite integrals where one or both of the boundaries is at infinity, or where the integrand has a vertical asymptote in the interval of integration. As crazy as it may sound, we can actually calculate some improper integrals using some clever methods that involve limits.

Introduction to improper integrals (video) | Khan Academy

In mathematical analysis, an improper integral is the limit of a definite integral as an endpoint of the interval of integration approaches either a specified real number, ∞ $\{ \displaystyle \infty \}$, $-\infty$ $\{ \displaystyle -\infty \}$, or in some instances as both endpoints approach limits. Such an integral is often written symbolically just like a standard definite integral, in some cases with infinity as a limit of integration. Specifically, an improper integral is a limit of the form: $\lim \dots$

11. Find the set of all values of p for which the following improper integrals converge. 1. $\int_0^1 (1-\sin x)^p dx$ Solution: Since $1-\sin x$ decreases on $[0, 1]$ and so $0 < 1-\sin x \leq 1$ for all $x \in [0, 1]$. So $1-\sin x < 1-\sin x \leq 1-\sin x \leq 1-\sin x$, and by the comparison test, the given integral converges if and only if $\int_0^1 (1-\sin x)^p dx$ converges, which means if and only if $p < 1$.
