This course provides detailed insight of the field of optical biosensors and their basic working principles. Starting with the introduction of basic components, characteristics, performance parameters and fabrication techniques (lectures 1&2), this course brings the learner to the mesmerizing field of sensors based on basic principles of optics.

Optical Sensors - Course - Nptel

An optical fiber is a cylindrical dielectric waveguide made of low-loss materials such as silica glass. It has a central core in which the light is guided, embedded in an outer cladding of slightly lower refractive index (Fig. 8.0-1). Light rays incident on the

FIBER OPTICS

Abstract. The development of fiber optics has revolutionized the field of telecommunications making possible high-quality, high-capacity, long distance telephone links Over the past three decades, the advancements in optical fiber has undoubtedly improved and reshaped fiber optic technology. Today optical fibers are synonymous with the word "telecommunication".
