Knowledge Works

Managing Intellectual Capital at Toshiba *Oxford University Press*

This book describes why, for the past twenty-five years, Japanese productivity has been growing more rapidly than productivity in the U.S. Unlike other books on the subject of the Japanese success in manufacturing, it looks at what actually happens in factories. The author brings his experience of working at the Yanagicho Works of the Toshiba Corporation, in Kawasaki City. Like so many Japanese factories, this one is highly productive, efficient, and flexible. While the factory is ordinary looking on the outside, its workers are anything but ordinary as they constantly strive to improve the way they work and the quality of the products they produce. The key to this is the continuous creation and application of knowledge throughout the factory, from workers on the shop floor, to research and development engineers, to top management. Fruin explains how Japanese culture and religion prepare workers for their role in this process of creating and disseminating knowledge.

Communities in Action

Pathways to Health Equity *National Academies Press*

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the

solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Snow Crystals

A Case Study in Spontaneous Structure Formation *Princeton University Press*

A definitive new investigation of the science of snowflakes by the world's leading expert A snowflake's sophisticated symmetry emerges when crystalline ice grows from water vapor within the winter clouds. While certain iconic snowflake shapes are visually familiar to us, microscopic close-ups of falling snow reveal a rich menagerie of lesser-known forms, including slender needle clusters, hollow columns, bullet rosettes, triangular crystals, and exotic capped columns. What explains the myriad and unusual structures of snowflakes that materialize under different atmospheric conditions? In Snow Crystals, Kenneth Libbrecht delves into the science of snowflakes, examining why ice crystals grow the way they do, how patterns emerge, and what they illuminate about the fundamental physics of crystal growth, structure formation, and self-assembly. Libbrecht—the world's foremost expert on snowflakes—describes the full range of physical processes underlying their occurrence. He explores such topics as the centuries-long development of snow crystal science, the crystalline structure of ice, molecular dynamics at the ice surface, diffusion-limited growth, surface attachment kinetics, computational models of snow crystal growth, laboratory techniques for creating and studying snow crystals, different types of natural snowflakes, and photographing snow crystals. Throughout, Libbrecht's extensive detailed discussions are accompanied by hundreds of beautiful full-color images. From the molecular dynamics of surface premelting to the aerodynamics of falling snow, Snow Crystals chronicles the continuing quest to

fully understand this fascinating phenomenon.

Pain Management and the Opioid Epidemic

Balancing Societal and Individual Benefits and Risks of Prescription Opioid Use *National Academies Press*
Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

Conservation and Globalization

A Study of National Parks and Indigenous Communities from East Africa to South Dakota *Wadsworth Publishing Company*
This book makes current issues in political ecology and the question of globalization accessible to undergraduate students, as well as to non-academic readers. It is also empirically and theoretically rigorous enough to appeal to an academic audience. CONSERVATION AND GLOBALIZATION opens with a discussion of these two broad issues as they relate to the author's fieldwork with Maasai herding communities on the margins of Tarangire National Park in Tanzania. It explores different theoretical perspectives (Neo-Marxist and Foucauldian) on globalization and why both are relevant to the case studies presented. Students are introduced to the practice of multi-sited ethnography and its centrality to the anthropological study of globalization. While drawing on examples from specific Maasai communities, the book is more broadly concerned with the historical and contemporary links between these communities and a global system of institutions, ideas, and money. The ecological incompatibility of Western national park-style conservation with East African savanna ecosystems and Maasai resource management practices, are highlighted. The concept of national parks is traced temporally and geographically from Maasai communities to the enclosure movement in 18th century England and westward expansion in 19th century North America. The relationships of parks to Judeo-Christian assumptions about "man's place in nature," colonial ideologies like Manifest Destiny and the Civilizing Mission, and capitalist notions of private property and "The Tragedy of the Commons," are explored. The book also looks at the latest conservation paradigm of "Community-Based Conservation," and explores its connections to the Soviet Collapse, economic and political liberalization, and the global proliferation of NGOs.
