... Adsorption can also be used to purify intake or circulating air streams and in fractionization of certain gases. The adsorption process can be both a physical and chemical process. In physical adsorption, the adsorbate molecules (the contaminate) adhere to the adsorbent materials in a physical bonding force referred to as "van der Waals forces".

Air Pollution Control Technology Review: Adsorption

1 The development of adsorption technology 1.1 INTRODUCTION The ability of some solids to remove colour from solutions containing dyes has been known for over a century. Similarly, air contaminated with unpleasant odours could be rendered odourless by passage of the air through a vessel containing charcoal.

Adsorption Technology and Design - W. Thomas, B ...

The adsorption technology is based on the sorption of certain substances by molecular sieves with the resulting air mixture separation. The adsorption technology allows efficiently producing such gases as nitrogen and oxygen from atmospheric air. Plants operation is based on the pressure swing adsorption principle with the feed air pressure exceeding the atmospheric level at the adsorption stage, and depressurization to the atmospheric pressure at the desorption stage.

Adsorption technology - GRASYS

Adsorption is the accumulation of concentration at a surface and is the consequence of interactive forces of physical attraction between the surface of porous solids and component molecules being removed from the bulk phase. During the twentieth century, adsorption technology survived as a means of purifying and separating both gases and liquids.

Adsorption Technology & Design | ScienceDirect

Pressure swing adsorption is a technology used to separate some gas species from a mixture of gases under pressure according to the species' molecular characteristics and affinity for an adsorbent material. It operates at near-ambient temperatures and differs significantly from cryogenic distillation techniques of gas separation. Specific adsorbent materials are used as a trap, preferentially adsorbing the target gas species at high pressure. The process then swings to low pressure to desorb the

Pressure swing adsorption - Wikipedia

Adsorption is present in many natural, physical, biological and chemical systems and is widely used in industrial applications such as heterogeneous catalysts, activated charcoal, capturing and using waste heat to provide cold water for air conditioning and other process requirements (adsorption chillers), synthetic resins, increasing storage capacity of carbide-derived carbons and water ...

ABSTRACT Global warming resulting from the emission of greenhouse gases, especially CO₂, has become a widespread concern in the recent years. Though various CO₂ capture technologies have been proposed, chemical absorption and adsorption are currently believed to be the most suitable ones for post-combustion power plants. The operation of the chemical absorption process is reviewed in this work ...

Adsorption refers to the collecting of molecules by the external surface or internal surface (walls of capillaries or crevices) of solids or by the surface of liquids. Absorption, with which it is often confused, refers to processes in which a substance penetrates into the actual interior of crystals, of blocks of amorphous solids, or of liquids. . Sometimes the word sorption is used to ...

Pressure swing adsorption (PSA) (Fig. 2) is a non-cryogenics air separation process which is commonly used in the commercial practice. This process involves the adsorption of the gas by adsorbent such as zeolite and silica in a high pressure gas column. In the PSA process, the air is drawn from the ambient and compressed into high pressure gas ...
