Hemophilia the royal disease case study answers

answered: drandbone92. Hemophilia was called \"the royal disease\" because many of the European royal families had members afflicted with hemophilia. Hemophilia is a sex-linked, recessive, X-chromosome disorder. It was known that Queen Victoria was unaffected but was a carrier of the hemophilia gene (XHXh). Explanation:

Hemophilia is called 'the royal disease' because many ...

The hemophilia trait is carried on the x chromosome. Males have only one x chromosome, therefore, if they have the hemophilia trait on the x chromosome they will have the disease. Females have two x chromosomes, if they have the hemophilia trait on one x chromosome they are carriers of the

disease but generally do not display symptoms. 20.
