Python For Loops. A for loop is used for iterating over a sequence (that is either a list, a tuple, a dictionary, a set, or a string).. This is less like the for keyword in other programming languages, and works more like an iterator method as found in other object-orientated programming languages.. With the for loop we can execute a set of statements, once for each item in a list, tuple, set etc.

Python For Loops - W3Schools

Object-oriented programming¶ Python is sometimes described as an object-oriented programming language. This can be somewhat misleading and needs to be clarified. In Python, everything is an object, and can be handled as such. This is what is meant when we say, for example, that functions are first-class objects.
