A theory of Poincaré series is developed for Lobachevsky space of arbitrary dimension. For a general non-uniform lattice a Selberg-Kloosterman zeta function is introduced. It has meromorphic continuation to the plane with poles at the corresponding automorphic spectrum. When the lattice is a unit group of a rational quadratic form, the Selberg-Kloosterman zeta function is computed explicitly ...

Part of the Progress in Mathematics book series (PM, volume 257) Abstract For an arbitrary Lie group G of real rank one, we give a formula for the Fourier coefficient $(D_{\chi}^{\prime})^{\chi}(\xi, \nu)$ of the M -series (a type of Poincaré series) defined in [17], in terms of Kloosterman-Selberg zeta functions $(\zeta_{\chi, \chi^{\prime}}(\mu))$.
