Behind the Shock Machine

The Untold Story of the Notorious Milgram Psychology Experiments *New Press, The*

When social psychologist Stanley Milgram invited volunteers to take part in an experiment at Yale in the summer of 1961, none of the participants could have foreseen the worldwide sensation that the published results would cause. Milgram reported that fully 65 percent of the volunteers had repeatedly administered electric shocks of increasing strength to a man they believed to be in severe pain, even suffering a life-threatening heart condition, simply because an authority figure had told them to do so. Such behavior was linked to atrocities committed by ordinary people under the Nazi regime and immediately gripped the public imagination. The experiments remain a source of controversy and fascination more than fifty years later. In *Behind the Shock Machine*, psychologist and author Gina Perry unearths for the first

time the full story of this controversial experiment and its startling repercussions. Interviewing the original participants—many of whom remain haunted to this day about what they did—and delving deep into Milgram's personal archive, she pieces together a more complex picture and much more troubling picture of these experiments than was originally presented by Milgram. Uncovering the details of the experiments leads her to question the validity of that 65 percent statistic and the claims that it revealed something essential about human nature. Fleshed out with dramatic transcripts of the tests themselves, the book puts a human face on the unwitting people who faced the moral test of the shock machine and offers a gripping, unforgettable tale of one man's ambition and an experiment that defined a generation.

Whistling Vivaldi: How Stereotypes Affect Us and What We Can Do (Issues of Our Time) *W. W. Norton & Company*

In Whistling Vivaldi, described as a 'beautifully-written account' of the relationship between stereotypes and identity, Claude Steele offers a vivid first-person detailing of the research that brought him to his groundbreaking conclusions. Through the telling of

dramatic personal stories, Dr. Steele shares the process of constructing and completing experiments and statistical studies that show that exposing subjects to stereotypes - merely reminding a group of female math majors about to take a math test, for example, that women are considered naturally inferior to men at math - impairs their performance in the area affected by the stereotype. Steele's conclusions shed new light on a host of American social phenomena, from the racial and gender gaps in standardized test scores to the belief in the superior athletic prowess of black men. As Homi Bhabha states, 'Steele's book is both urgent and important in understanding the tyranny of the stereotype and liberating ourselves from its derogatory, one-dimensional vision.' Whistling Vivaldi presents a new way of looking at identity and the way it is shaped by social expectations, and, in Richard Thompson Ford's words, 'offers a clear and compelling analysis and, better still, straightforward and practical solutions.'

A Theory of System Justification

Psychologist John Jost has spent decades researching poor people who vote for policies of inequality and women who think men deserve higher salaries. He argues that the persecuted often justify and defend the very social systems that oppress them because doing so serves a fundamental need for certainty, security, and social acceptance.

Communities in Action

Pathways to Health Equity *National Academies Press*

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

The Psychology of Fake News

Accepting, Sharing, and Correcting Misinformation
Routledge

This volume examines the phenomenon of fake news by bringing together leading experts from different fields within psychology and related areas, and explores what has become a prominent feature of public discourse since the first Brexit referendum and the 2016 US election campaign. Dealing with misinformation is important in many areas of daily life, including politics, the marketplace, health communication, journalism, education, and science. In a general climate where facts and misinformation blur, and are intentionally blurred, this book asks what determines whether people accept and share (mis)information, and what can be done to counter misinformation? All three of these aspects need to be understood in the context of online social networks, which have fundamentally changed the way information is produced, consumed, and transmitted. The contributions within this volume summarize the most up-to-date empirical findings, theories, and applications and discuss cutting-edge ideas and future directions of interventions to counter fake news. Also providing guidance on how to handle misinformation in an age of "alternative facts", this is a fascinating and vital reading for students and academics in psychology, communication, and political science and for professionals including policy makers and journalists.
