Abstract. The Fisher and Neyman-Pearson approaches to testing statistical hypotheses are compared with respect to their attitudes to the interpretation of the outcome, to power, to conditioning, and to the use of fixed significance levels. It is argued that despite basic philosophical differences, in their main practical aspects the two theories are complementary rather than contradictory and that a unified approach is possible that

combines the best features of both.

Neyman-Pearson subjectively chose the criterion for selection (which was not limited to a probability). Both subjectively determined numeric thresholds. Fisher and Neyman were separated by attitudes and perhaps language. Fisher was a scientist and an intuitive mathematician. Inductive reasoning was natural. Neyman was a rigorous mathematician.

Foundations of statistics - Wikipedia

The Fisherian and Neyman-Pearson approaches are not the same. The central contention of the Neyman-Pearson framework is that at the end of your study, you have to make a decision and walk away. Allegedly, a researcher once approached Fisher with 'non-significant' results, asking him what he should do, and Fisher said, 'go get more data'.

hypothesis testing - When to use Fisher and Neyman-Pearson ...

A variant of the Neyman-Pearson lemma has found an application in the seemingly unrelated domain of the economics of land value. One of the fundamental problems in consumer theory is calculating the demand function of the consumer given the prices. In particular, given a heterogeneous land-estate, a price measure over the land, and a subjective utility measure over the land, the consumer's problem is to calculate the best land parcel that he can buy – i.e. the land parcel with the ...
