Spatial point processes play a fundamental role in spatial statistics and today they are an active area of research with many new applications. Although other published works address different aspects of spatial point processes, most of the classical literature deals only with nonparametric methods, and a thorough treatment of the theory and applications of simulation-based inference is ...

Statistical inference is performed within the context of a statistical model, and in simulation-based inference the simulator itself defines the statistical model. For the purpose of this paper, a simulator is a computer program that takes as input a vector of parameters θ , samples a series of internal states or latent variables $z_i \sim p_i(z_i | \theta, z_{<i})$, and finally produces a data vector $x \sim p(x | \theta, z)$ as output.

The frontier of simulation-based inference | PNAS

Abstract. Statistical models are the traditional choice to test scientific theories when observations, processes or boundary conditions are subject to stochasticity. Many important systems in ecology and biology, however, are difficult to capture with statistical models. Stochastic simulation models offer an alternative, but they were hitherto associated with a major

disadvantage: their likelihood functions can usually not be calculated explicitly, and thus it is difficult to couple them to ...

Statistical inference for stochastic simulation models ...

Statistical inference is the process of using data analysis to deduce properties of an underlying distribution of probability. Inferential statistical analysis infers properties of a population, for example by testing hypotheses and deriving estimates. It is assumed that the observed data set is sampled from a larger population.. Inferential statistics can be contrasted with descriptive statistics.

Here we introduce a stochastic simulation and statistical inference platform for modeling detailed transcriptional kinetics in prokaryotic systems, which has not been solved analytically. The model includes stochastic two-state gene activation, mRNA synthesis initiation and stepwise elongation, release to the cytoplasm, and stepwise co-transcriptional degradation.

Simulation Problem: In statistical inference, one wishes to estimate unknown population parameters θ (for example, the population mean) using observed sample data. A confidence interval is a random interval calculated from the sample data that contains θ with a specified probability.

Video Transcript. Statistical inference is the process of drawing conclusions about populations or scientific truths from data. There are many modes of performing inference including statistical modeling, data oriented strategies and explicit use of designs and randomization in analyses. Furthermore, there are broad theories (frequentists, Bayesian, likelihood, design based, ...) and numerous complexities (missing data, observed and unobserved confounding, biases) for performing inference.

Simulation also helped deepen my intuition for associated concepts like statistical inference and residual variation (the role of the “error term”) in ways that no thought experiment or mathematical representation ever did for me. 3. Simulation forces you to take BOTH the theoretical model AND the statistical model seriously at the same time.
