The MPLS VPN is more secure than a regular Internet connection, it's basically like a virtual leased line. However it runs no encryption. So it is free from eavesdropping unless someone misconfigures the VPN but if you carry sensitive traffic it should still be encrypted.

The MPLS VPN model is

a true peer VPN model
that enforces traffic
separations by
assigning unique VPN
route forwarding tables
(VRFs) to each
customer's VPN. Thus,
users in a specific VPN
cannot see traffic
outside their VPN.
Traffic separation
occurs without
tunneling or encryption
because it is built
directly into the
network.
