Lizards -- identification guide - - Discover Life

A dichotomous key is a type of single-access key that offers only two choices at one time. These keys are commonly used in biology in order to identify an unknown animal or plant. In order to use these keys, the user determines which of the two different choices is correct and then follows the key until a final choice eventually leads to the name of the organism.

Dichotomous Keys as a tool for identifying species or morphs
Never seen anyone

mention dichotomous keys on the forum, and I use something like a mental version of one when I'm trying to identify a corn morph or North American ratsnake... well, actually, identifying anything.
