How the Internet Works 8th Edition - amazon.com

These are Internet routers that decide where to send your packets. Several routers are shown in Diagram 3, but only a few. Diagram 3 is meant to show a simple network structure. The Internet is much more complex. Internet Infrastructure The Internet backbone is made up of many large networks which interconnect with each other.

How Does the Internet Work? - Stanford University

Every year, engineers create more devices to integrate with the Internet. This network of networks crisscrosses the globe and even extends into space. But what makes it work? To understand the Internet, it helps to look at it as a system with two main components. The first of those components is hardware. That includes everything from the cables that carry terabits of information every second to the computer sitting in front of you.

How the Internet Works 8th (egith) edition Text Only ...

The Internet has one very simple job: to move computerized information (known as data) from one place to another. That's it! The machines that make up the Internet treat all the information they handle in exactly the same way. In this respect, the Internet works a bit like the postal service.

How the Internet works: A simple introduction

The Internet Protocol (IP) is the protocol which allows messages, known as packets, to find their way across more complex networks like the Internet. Unlike Ethernet, which works by broadcast-ing messages to everyone including the recipient, IP allows messages to be routed to the correct destination.
