Fundamental Counting Principle. If you have a ways of doing event 1, b ways of doing event 2, and c ways of event 3, then you can find the total number of outcomes by multiplying: $a \times b \times c$. This principle is difficult to explain in words. To find the total number of outcomes for the scenario, multiply the total outcomes for each individual event.

Counting Principle - WorksheetWorks.com

So by the counting principle there are 4×3 ways of filling the first

2 positions. For each of these choices there are now 2 letters left and there are two ways of filling the third position. The remaining letter must then go in the last position. Thus by the counting principle, there are $4 \times 3 \times 2 \times 1 = 4!$ possible arrangements, ie 24 of them.
