Compounds are fixed combinations of elements. A compound is any substance made up of two or more elements combining in a fixed ratio. Many molecules are compounds, but not all compounds are molecules—compounds can also be made up of atoms participating in ionic interactions. Water—chemical formula H_2O —is an example of a molecular compound. No matter where it is found, it will always contain two hydrogen atoms for each oxygen atom, and the three atoms that make up a single molecule of ...
