combines vector algebra with calculus. To give you a feeling for the issues, suppose you were interested in the temperature  $T$  of water in a river. Temperature  $T$  is a scalar, and will certainly be a function of a position vector  $\mathbf{x} = (x, y, z)$  and may also be a function of time  $t$ :  $T = T(\mathbf{x}, t)$ . It is a scalar field.

Demonstrate a understanding of the fundamental concepts of vector algebra and vector calculus; specifically students should be able to: \* describe and sketch vector fields in two and three dimensions. \* compute and interpret line and surface integrals through scalar or vector fields. \* explain and apply Green's Theorem.

### **AMS 261 | Applied Mathematics & Statistics**

Vector calculus, or vector analysis, is

concerned with differentiation and integration of vector fields, primarily in 3-dimensional Euclidean space  $\mathbb{R}^3$ . The term "vector calculus" is sometimes used as a synonym for the broader subject of multivariable calculus, which includes vector calculus as well as partial differentiation and multiple integration. Vector calculus plays an important role in differential geometry and in the study of partial differential equations.
