60 Electromagnetic Fields and Waves We will shortly see that the curl of the electric field vanishes if there are no time-varying magnetic fields, which according to equation (6.13) means that the electric field can be written as the gradient of a potential Φ $\vec{E} = -\nabla\Phi$. (6.28) Given this definition, the potential from a point charge is $\Phi = q$

Electric Field and Waves Suite (EFW) EFW will study the electric fields in near-Earth space that energize radiation particles and modify the structure of the inner magnetosphere. This investigation consists of a set of four

spin-plane electric field (E-field) antennae and a set of two spin-axis stacer (tubular, extendable) booms.
