Real-Time Concepts for Embedded Systems by€Qing Li€and ...

The real-time operating system used for a real-time application means for those applications where data processing should be done in the fixed and small quantum of time. It is different from general purpose computer where time concept is not considered as much crucial as in Real-Time Operating System.

What is real-time operating system (RTOS)? - Definition ...

A real-time operating system is an operating system intended to serve real-time applications that process data as it comes in, typically without buffer delays. Processing time requirements are measured in tenths of seconds or shorter increments of time. A real-time system is a time-bound system which has well-defined, fixed time constraints. Processing must be done within the defined constraints or the system will fail. They either are event-driven or time-sharing. Event-driven systems switch be

Real-time operating system - Wikipedia

The book and sample code (from the author) develops a working microcontroller real time operating system. It explores the issues encountered in priority, synchronization, deadlocks, and process management. While the author's English could use some editing, it is a useful reference.
