Bit Error Rate Analysis In

In digital transmission, the number of bit errors is the number of received bits of a data stream over a communication channel that have been altered due to noise, interference, distortion or bit synchronization errors. The bit error rate is the number of bit errors per unit time. The bit error ratio is the number of bit errors divided by the total number of transferred bits during a studied time interval. Bit error ratio is a unitless performance measure, often expressed as a percentage. The bi

BER is simply the average number of bits received in error divided by the total number of bits received. Scientific notation is used to express BER, since the number of errors had better be quite small. If one bit out of every million received is in error, then the BER is.
