Multilayer stack molds, gas assisted molding, overmolding, co-injection, advanced hot runner systems and other technologies have collapsed the cost of high-volume commodity resin parts. At the other extreme, a new generation of functional fillers and special-purpose engineering resins are allowing very large, special purpose part making for industries such as automotive, aerospace and medicine.

Injection Mold Design: Why Simulation is ... - Engineering

Designing the mold.

The mold used in injection molding is composed of two halves. They are known as the cavity side (side A) and the core side (side B). The core side is where the ejector plate and ejector pins are located. Once the molten plastic solidifies, the side A moves up and the side B then ejects the part resting on it using ejector pins.

Even Simple Parts Can Require Complex Mold Design At its simplest, injection molding is about orienting cavities in three-dimensional space with a parting line that allows free ejection of the cooled, solid resin parts. Simply determining the

location of the parting line can be nontrivial.
