This is an attempt to deliver, within a couple of hours, a few key-concepts of non- equilibrium statistical mechanics. The material covered by the notes is sometimes a bit wider in scope and often more detailed than a presentation can be. The goal is to develop some ideas of contemporary research.

by Gunnar Pruessner

Non-equilibrium thermodynamics is a branch of thermodynamics that deals with physical systems that are not in thermodynamic equilibrium but can be described in terms of variables that represent an extrapolation of the variables used to specify the system in thermodynamic equilibrium. Non-equilibrium thermodynamics is concerned with transport processes and with the rates of chemical reactions. It relies on what may be thought of as more or less nearness to thermodynamic equilibrium. Almost all sy
